

# APPLICATION GUIDE

GrowPro®

## Key Information

The following are guidelines for applying GrowPro Organic Soil Enhancer on vegetables.

For best results, use GrowPro at the early stage and mid stage of the crop cycle. GrowPro can however be used on crops throughout the crop cycle, even if other products like chemical NPK have been applied previously. Just allow a minimum of 15 days between chemical fertilizer and GrowPro application.

When diluting GrowPro in to chlorinated water, make sure the water has been standing for 48 hours to remove traces of chlorine.

When using chemical pesticides/fungicides/insecticides, ensure that you spray on to the plant but **do not** spray the soil as the GrowPro microbes must be kept away from direct contact with them.

## Storage & Safety

Store in a cool and dry place at room temperature.

Keep away from direct sunlight.

Avoid skin and eye contact.

Keep away from children's reach.

## Recommended Usage

1 Hectare - Apply 5kg of GrowPro per Crop Cycle

1 Acre - Apply 2kg of GrowPro per Crop Cycle

**Crop Type:** Leafy, Stem, Fruit-Bearing Vegetables; Bulbs, Tubers; Other Root Vegetables

**Crop Duration:** 1-7 months

Artichokes	Eggplant	Radishes
Asparagus	Garlic	Shallots
Broccoli	Gourds	Spinach
Cabbages	Leeks	Squash
Carrots	Lettuce	Sweet Potatoes
Cassava	Okra	Tomatoes
Cauliflower	Onions	Turnips
Chicory	Potatoes	Yams
Cucumbers	Pumpkin	Other Vegetables

## APPLICATION GUIDE

GrowPro®

Per Hectare	
Application Timing	Application Rate
14 Days After Germination <i>(Only one application required for 1 month duration crops)</i>	Dilute 2 x 1kg packets of GrowPro in to 80 litres of non chlorinated water. Use directly after dilution as the water will now contain active microbes. Apply to the soil before sunrise or after sunset via drip irrigation, spraying, watering can or drenching.
28 Days After Germination	Dilute 3 x 1kg packets of GrowPro in to 120 litres of non chlorinated water. Use directly after dilution as the water will now contain active microbes. Apply to the soil before sunrise or after sunset via drip irrigation, spraying, watering can or drenching.

Per Acre
